Udemy

## LANGUAGE

• English

## PROFILE INFO

I'm a frontend web developer with experience in HTML, CSS and JavaScript/Typescript. From responsive to cross-browser compatibility using bootstrap, tailwind or plain csss. I always strive to deliver high-quality web solutions using frontend frameworks such as React, Vue and Angular. However, with the importance of having a solid backend infrastructure to support these applications. That's why I am currently learning backend technologies such as Node.js, Express.js, MongoDB, MySQL and Python.

## RECENT PROJECTS

### El's Worth

#### React Project

A company website for electrical products and services. A user can login or signup in order to buy a product or request for a service such as electrical wiring

### Qualis

#### Angular Project

A company website which offers loans for SME and civil servants. Users can apply for a loan online and upload documents in order to be eligible for the loan.

### QuickBoi

#### React Project

A ride delivery app. Users can enter the pick up location and destination of the parcel or pick the location direct from the map.
